

# Ultimate Mem Creator

## Sprint 2 Challenge

Your challenge is to create a Meme Generator that looks good, and works well **on mobile**.

[Here is a reference implementation,](#)  
but we expect your solution to be better.

Use the mobile-first strategy to plan your UI, keep in mind that we would like it to look good also on desktop

Implement the PSD provided by the client, use the Seed project provided.

When you read the requirement make yourself a list of questions for your meeting with the client (in this case – its us), we suggest that you don't start coding too much before getting an approval from your client.

### Recommended Workflow

1. Start together, review and understand the seed project.
2. Setup git and make sure the team can push and pull from the repository.
3. Design an initial home page (index.html) together (don't spend more than 2 hours at this stage)

4. Commit and Push
5. Split and work separately and together whenever you see fit.
  - a. Try to push and pull every 2-3 hours to coordinate your code and practice the workflow
  - b. Use this opportunity to improve the code by mutual code reviews

–

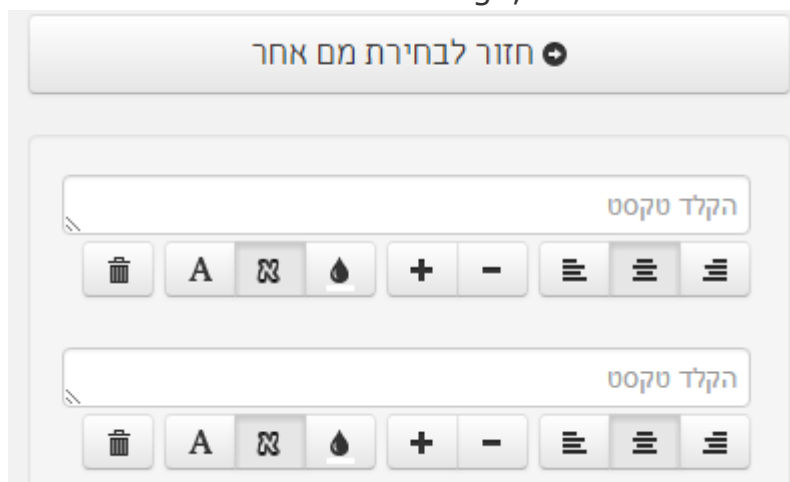

### Step 1 - Choose Image

1. Show a list of images
2. Those img objects in your model should have the properties: id, url, keywords[]
  - a. The image file itself is named by the id
  - b. The keywords should be things like: happy, crazy, sarcastic, sad, animal...
  - c. The user should be able to filter the presented list by typing in a filter textbox
  - d. And also by selecting a keyword from a list where each item is as big as it's a popular search, something like this:

Google All Things Digital  
 Arts Technica Business Week Yahoo  
 Center Networks Crave  
 Crunch Gear Daily Tech  
 Electronista Engadget Gearlog Information Week  
 PCWorld Tech Republic Valleywag  
 Rediff WebProNews

3. After the user selects an image, he should be able to build the mem.

## Team Members Responsibility

Here is a breakdown of the features and a recommendation for splitting the work

1. Home page
  - a. Build the layout by the PSD
 

Note that the designer has not completed the entire design before passing away.
  - b. Dev 1: Navigation
  - c. Dev 2 About us Section
  - d. Dev 1: Render images for selection
  - e. Dev 2: Filter images list by search box
  - f. Dev 1: Filter images list by popular-search
  - g. Support two presentations modes: cards (Dev 1) and list (Dev 2)
  - h. Dev 1: Support adding an image by url
2. Mem Generator

- a. Dev 2: Support adding text on the top and bottom of the image
  - b. Support features:
    - i. Dev 1: Align left, right, center
    - ii. Dev 2: Increase / decrease font size
    - iii. Dev 1: Text color
    - iv. Dev 2: Text shadow (on/off)
    - v. Dev 1: Select font
    - vi. Dev 2: Reset text
  - c. Dev 2: Save button
  - d. Dev 1: Back to images list
3. Contact us form, for now, when the user send a contact save it to local storage Bonus: Support multilingual site: Heb / Eng
